

Database Schema Diagram

The system utilizes 6 interconnected models to manage the hostel's ecosystem.

1. Schema Relationships (ER Diagram)

2. Model Descriptions

- User**: Stores credentials and profile data. The role field determines UI/API access levels.
- Room**: Contains physical attributes and status tracking.
- Booking**: Acts as the link between Users and Rooms, tracking the duration of stay.
- Maintenance**: Tracks facility issues and resolution progress.
- Visitor**: Manages temporary access to the hostel premises.
- FeePayment**: Records financial transactions and digital receipts.
